Earthing instructions

The I/O units should be earthed to switchgear earth as below:

**OPTION 1**

If the earthing potential varies in the switchgear installation, the earthing should be done from the central unit, in parallel with the communication cable (VX001). In this case the dinrail connection between slaves and switchgear should be isolated!
OPTION 2

If the switchgear earthing solid!

Use a 2.5 mm² multicore cable. Attach it via an AMP connector to the top right corner of the I/O unit.

Washer with teeth to perforate the painted surface.
